

# Suggested Categories

## [Suggested Categories By Subject](#)

## [Public Health Data Collection Systems](#)

## [Suggested Categories by Roles](#)

### **Suggested Categories by Subject:**

#### **HIPAA**

- ( 1 ) privacy and security
- ( 2 ) administrative data
- ( 3 ) transactions
- ( 4 ) code sets
- ( 5 ) HIPAA Implementation
- ( 6 ) HIPAA Basics

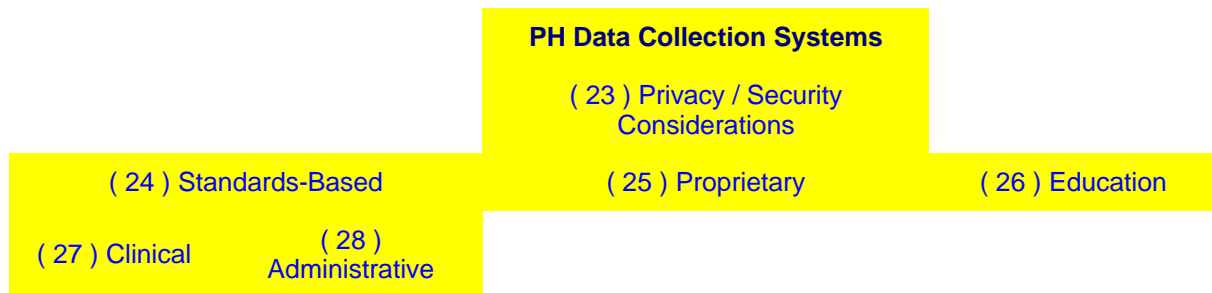

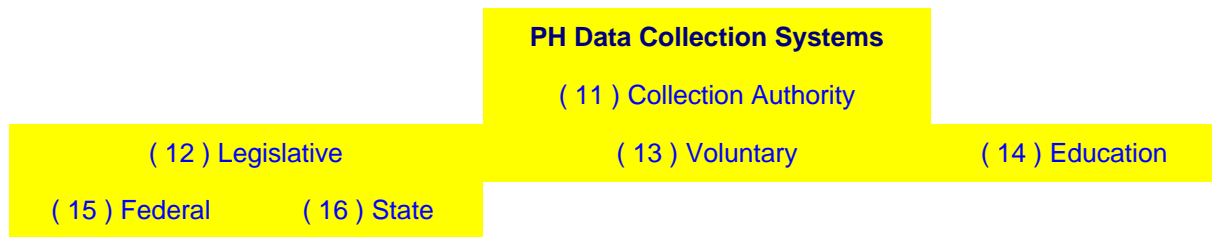

#### **Non-HIPAA**

- ( 7 ) NEDSS
- ( 8 ) clinical standards
- ( 9 ) laboratory
- ( 10 ) Data Standards Basics

### **Public Health Data Collection Systems**

Below is list of categories to be considered under a broader heading of Public Health Data Collection Systems. Not included in this schematic is a category for the Consortium with links to member organization pages.

Note: The chart was broken into 3 sections for easier use.

## Suggested Categories by Roles

### Decision Makers

- ( 29 ) SHD pages that highlight standards and data integration issues
- ( 30 ) Association pages that highlight standards and data integration issues

### Funders

- ( 31 ) Pages on foundation sponsored health data projects
- ( 32 ) Pages related to health data standardization at different jurisdictional levels

### Collectors

- ( 33 ) Association, government, and private sector site pages that identify

methods of access to their data

( 34 ) Technical tutorials on system re-tooling processes (for standardization).

( 35 ) Pages that explain standards development process and how to participate

( 36 ) Pages at standards development organizations web sites most relevant to collectors

( 37 ) Pages that identify current standards and standards under development

( 38 ) Pages that explain the benefits and processes of data integration

## **Users**

( 39 ) Pages that allow them to express their needs via associations

( 40 ) Pages that explain standards development process and how to participate

( 41 ) Pages that explain user benefits of standardized data

( 42 ) Pages that explain the benefits and processes of data integration

## **Suppliers**

( 43 ) Pages that describe requirements for reportable data

( 44 ) Pages that identify benefits of data sharing (including added value to data analyzed and returned to supplier with contrived fields, feedback, etc.)

( 45 ) Pages on emerging technologies for electronic data interchange

( 46 ) Pages that explain how health outcomes are improved with more data, standardized data, and integrated data

## **Comments:**

Non-HIPAA/NEDSS: Although I think NEDSS is an important initiative, as far as data standards are concerned, I am not sure how much work is being done since the demographic data were standardized (CIPHER). I also don't know if people are actually using CIPHER standards. More recently, it appears that NEDSS standards development has been focused on system architecture and security standards.

HIPAA/code sets: Code sets may be better placed as a sub-category.
